Tomorrow's answers, delivered today. This ambition defines us. This is the way we work. This is why we come to work. This is AkzoNobel.

AkzoNobel is one of the largest paint and coatings companies in the world as well as a major producer of specialty chemicals. We are passionate about developing innovative products and services which provide sustainable solutions for industries and consumers.

We have been consistently listed within the top five rankings of the Dow Jones Sustainability Index. Looking to the future, AkzoNobel has defined the following sustainability ambitions.....

By 2020, our downstream eco-premium products will account for 20% of revenues and carbon emissions will be reduced by 25 to 30 percent per ton of product (base 2012).

The AkzoNobel Pontiac facility was established in 1989. This site manufactures products for the Vehicle Refinish, Commercial Vehicle, Automotive Plastic Components and Sign market segments.

Based on both current and growing demand in North America for products that are more favorable for the environment, the Pontiac site is investing in excess of \$5M to expand the capacity to produce waterborne products.

Our achievements from 2008 through 2012 include:

- ✓ 14% reduction in total waste per ton of product produced
- ✓ 29% reduction in landfill waste
- ✓ 26% reduction in CO2 emissions per ton of product produced from 2009 through 2012
